Pathogen Surveillance · Week 16

AI-powered analysis of 12 regulatory recall actions across 6 jurisdictions, aggregated from 66 primary sources monitored continuously by the AFTS intelligence platform.

TOTAL RECALLS 12 ▼ -55 (-82%) vs prior week	TIER-1 CRITICAL 7 Immediate public-health risk	ACTIVE OUTBREAKS 0 Confirmed cluster events	LEADING PATHOGEN Listeria monocytogenes 5 cases · 42% of total
--	---	--	---

§ 01 Intelligence Analysis

This week produced 12 pathogen-related recall incidents across the AFTS monitoring network, with 7 classified as Tier-1 and 0 confirmed outbreak event(s). *Listeria monocytogenes* dominated the surveillance window, accounting for 5 of 12 incidents (42%). The elevated Tier-1 ratio indicates sustained regulatory pressure and should be read by food manufacturers as a signal of tightening enforcement.

Listeria monocytogenes at this prevalence points to post-process recontamination in ready-to-eat deli, dairy, and cooked-meat lines rather than thermal underprocess. The likely failure modes are Zone 1 environmental harbourage, sanitation SOP drift, and post-lethality recontamination. 21 CFR 117 environmental monitoring and the 6-log *Listeria* lethality requirement (21 CFR 113/114 where applicable) are the relevant frameworks for review.

Regulatory activity this week spanned multiple jurisdictions (RASFF, FDA, CFIA, FSA, and national authorities), signalling continued inspection intensity. AFTS recommends that food manufacturers use this briefing as a prompt to re-verify the single highest-leverage control for their commodity this week and to confirm documentation packages are ready for rapid regulatory response.

PROCESS AUTHORITY NOTE: This window contains 2 incident(s) implicating *Clostridium* or botulinum toxin, with Marché Rio (Canada) cited for *Clostridium botulinum*. Any shelf-stable low-acid, acidified, aseptic/UHT, hot-filled, or reduced-oxygen-packaged product in the affected category must be reviewed to confirm the scheduled thermal process under a qualified process authority — required under FDA 21 CFR 113/114, EU Reg. 852/2004, CFIA SFCR, FSANZ Food Standards Code Ch. 3, and Japan's Food Sanitation Act. Typical compliance gaps: unfiled or

outdated scheduled process, deviation resolved without qualified review, container or seal-integrity lapse, or a formulation change (pH, a_w, salt, preservative) not re-evaluated. A Tier-1 / Class-I classification on a product of this class reliably triggers a process-filing audit and regulatory citations in every major jurisdiction.

§ 02 Top 5 Critical Threats

Ranked by pathogen severity (C. botulinum → Listeria → STEC → Salmonella), outbreak status, and tier classification. Each row links to the originating regulatory notice.

#	DATE	PATHOGEN	COMPANY / BRAND	PRODUCT	JURISDICTION & SOURCE
1	13 Apr 2026	Clostridium botulinum T1	Marché Rio —	Épices haïtiennes / Haitian spices — plastic container, refrigerated	Canada MAPAQ QC View source →
2	15 Apr 2026	Clostridium botulinum T1	Liquid Blenz Corp Good Brain Tonic	Good Brain Tonic 16 oz & 32 oz (All codes)	United States FDA View source →
3	11 Apr 2026	Listeria monocytogenes T1	Les délices de la cabraire Les délices de la cabraire	fromage de brebis fermier	France RappelConso (FR) View source →
4	14 Apr 2026	Listeria monocytogenes T1	7-Eleven Canada 7-Eleven	12 sandwich/sub/wrap products	Canada CFIA View source →
5	14 Apr 2026	Listeria monocytogenes T1	NOTRE JARDIN NOTRE JARDIN	SALADE COMPOSEE 400G	France RappelConso (FR) View source →

§ 03 Distribution Analysis

PATHOGEN PROFILE

PATHOGEN	CASES	%	SHARE
Listeria monocytogenes	5	42%	
Salmonella spp.	4	33%	
Clostridium botulinum	2	17%	
E. coli	1	8%	

COUNTRY	AUTHORITY	CASES	%
France	RappelConso / DGCCRF	4	33%
Germany	BVL	3	25%
Canada	CFIA	2	17%
United States	FDA / USDA FSIS	1	8%
New Zealand	MPI / FSANZ	1	8%
Italy	Ministero della Salute	1	8%

§ 04 All 12 Recalls · 11 Apr - 17 Apr 2026

Complete record for the reporting period. Sorted by pathogen severity, outbreak status, and tier classification. Each row links to the originating regulatory notice.

#	DATE	PATHOGEN	COMPANY / BRAND	PRODUCT	JURISDICTION & SOURCE
1	13 Apr 2026	 Clostridium botulinum 	Marché Rio —	Épices haïtiennes / Haitian spices — plastic container, refrigerated	Canada MAPAQ QC View source →

§ 05 Methodology & Sources

Process authority. Analytical frameworks, severity rubrics, pathogen classification, and the engineering interpretation of each recall are developed under the process authority of AFTS, drawing on in-house expertise in food process engineering, thermal processing, and regulatory compliance. Every view is grounded in validated process engineering: thermal processing (21 CFR 113/114), pasteurisation (PMO), aseptic and UHT, hold-tube and F-value lethality, and HACCP. This is what the AFTS platform brings that pure data feeds do not — data under engineering authority.

Data & AI pipeline. The system aggregates regulatory recall notices from 66 primary sources across 60+ countries (FDA, USDA FSIS, RASFF, FSA, FSANZ, CFIA, RappelConso, BVL, AESAN, EFET, and national authorities) and processes each record through Gemini (extraction), OpenAI GPT (normalisation), and Claude (Tier-1 validation). Records are de-duplicated and harmonised into the accumulative dataset.

This briefing. Statistical analysis filters the accumulative dataset to the reporting week (11 Apr – 17 Apr 2026). AI-generated narrative is produced against AFTS process-authority prompts and edited for publication. Figures and pathogen names are preserved verbatim from source data.
