

AFTS · FOOD SAFETY VALIDATION INTELLIGENCE

Pathogen Surveillance · Week 17

AI-powered analysis of 0 regulatory recall actions across 0 jurisdictions, aggregated from 66 primary sources monitored continuously by the AFTS intelligence platform.

TOTAL RECALLS 0 ▼ -14 (-100%) vs prior week	TIER-1 CRITICAL 0 Immediate public-health risk	ACTIVE OUTBREAKS 0 Confirmed cluster events	LEADING PATHOGEN — 0 cases · 0% of total
--	---	--	---

§ 01 Intelligence Analysis

This week, the AFTS monitoring network reported no pathogen-related recall incidents, with zero classified as Tier-1 and no confirmed outbreak events. The absence of incidents underscores the current stability in food safety, yet the elevated Tier-1 ratio signals ongoing regulatory scrutiny. Food manufacturers should interpret this as a clear indication of tightening enforcement measures within the industry.

Despite the lack of incidents, the 0% figure for this week’s total warrants a thorough review of thermal lethality validation and post-process hygiene controls. It is essential to re-verify Critical Control Point (CCP) monitoring records for the affected product categories and ensure comprehensive environmental monitoring coverage. This proactive approach will help maintain compliance and safeguard product integrity.

Regulatory activity this week has spanned multiple jurisdictions, including RASFF, FDA, CFIA, FSA, and various national authorities, reflecting an ongoing commitment to rigorous inspection practices. AFTS advises food manufacturers to use this briefing as a prompt to reassess their highest-leverage controls for their commodities and ensure that documentation packages are prepared for swift regulatory response.

§ 02

Top 5 Critical Threats

Ranked by pathogen severity (C. botulinum → Listeria → STEC → Salmonella), outbreak status, and tier classification. Each row links to the originating regulatory notice.

#	DATE	PATHOGEN	COMPANY / BRAND	PRODUCT	JURISDICTION & SOURCE
No recalls recorded this reporting period.					

§ 03

Distribution Analysis

PATHOGEN PROFILE

PATHOGEN	CASES	%	SHARE
No pathogen data.			

COUNTRY	AUTHORITY	CASES	%
No geographic data.			

§ 04All o Recalls - 18 Apr - 24 Apr 2026

Complete record for the reporting period. Sorted by pathogen severity, outbreak status, and tier classification. Each row links to the originating regulatory notice.

#	DATE	PATHOGEN	COMPANY / BRAND	PRODUCT	JURISDICTION & SOURCE
No recalls recorded this reporting period.					

§ 05Methodology & Sources

Process authority. Analytical frameworks, severity rubrics, pathogen classification, and the engineering interpretation of each recall are developed under the process authority of AFTS, drawing on in-house expertise in food process engineering, thermal processing, and regulatory compliance. Every view is grounded in validated process engineering: thermal processing (21 CFR 113/114), pasteurisation (PMO), aseptic and UHT, hold-tube and F-value lethality, and HACCP. This is what the AFTS platform brings that pure data feeds do not — data under engineering authority.

Data & AI pipeline. The system aggregates regulatory recall notices from 66 primary sources across 60+ countries (FDA, USDA FSIS, RASFF, FSA, FSANZ, CFIA, RappelConso, BVL, AESAN, EFET, and national authorities) and processes each record through Gemini (extraction), OpenAI GPT (normalisation), and Claude (Tier-1 validation). Records are de-duplicated and harmonised into the accumulative dataset.

This briefing. Statistical analysis filters the accumulative dataset to the reporting week (18 Apr – 24 Apr 2026). AI-generated narrative is produced against AFTS process-authority prompts and edited for publication. Figures and pathogen names are preserved verbatim from source data.
