OUTBREAK EVENTS

Intelligence Analysis

Executive Stakeholder Food Safety Intelligence Report This report outlines significant pathogen activity recorded this week, involving 19 total recall incidents that necessitated regulatory intervention. Notably, 9 of these incidents were classified as Tier-1 critical, posing an immediate public health risk and necessitating rapid containment efforts. *Listeria monocytogenes* has emerged as the predominant pathogen threat, implicated in 4 documented cases, accounting for 21% of the total incidents. This concentration points to potential systemic contamination issues, highlighting a need for strengthened surveillance protocols across the relevant product categories and manufacturing facilities. An analysis of geographic distribution shows regulatory activity across multiple jurisdictions, with 3 confirmed outbreak events occurring during the surveillance period. The widespread nature of these incidents underscores the importance of maintaining vigilance across global supply chains and enhancing collaboration between international food safety authorities. Actionable Insights: - Implement intensified surveillance protocols in facilities and product categories identified as high-risk for *Listeria monocytogenes* contamination. - Strengthen international partnerships to improve coordination and response strategies across global

supply chains in light of the distributed nature of recent incidents. - Prioritize and allocate resources for rapid containment measures to address Tier-1 critical incidents effectively. This report ensures these actions are undertaken with the necessary urgency to safeguard public health without causing undue alarm.

Top 5 Critical Threats - Prioritized by Pathogen Severity

Priority	Pathogen	Company	Product	Country
1	Listeria monocytogenes	Salaisons THAURIN	Charcuterie — Viandes	France
2	Listeria monocytogenes	Southern Alp Sprouts	Alfalfa & Onion Sprouts - 120g	New Zealand
3	Listeria monocytogenes	GAEC DE LA CASCADE	Terrine forestière	France
4	Listeria monocytogenes	NEUTRE PETIT PRIX	COPPA 8 TRANCHES 80G (barquette) — Viandes	France
5	E. coli STEC (Shiga toxin-producing)	Sans marque	Lait et produits laitiers	France

Current Pathogen Distribution

Pathogen	Cases	% of Total	Classification
Listeria monocytogenes	4	21%	Tier-1
Salmonella	3	16%	Tier-1
Rodenticide	3	16%	Tier-1
Histamine	2	11%	Tier-1
E. coli STEC	1	5%	Tier-1
Peanut	1	5%	Tier-1

Pathogen	Cases	% of Total	Classification
Cereulide	1	5%	Tier-1
rat poison	1	5%	Tier-1
Bacillus cereus	1	5%	Tier-1
Rodent contamination	1	5%	Tier-1

Geographic Distribution

Country	Regulatory Authority	Cases	% of Total
France	Multiple Sources	7	37%
United Kingdom	Multiple Sources	2	11%
Colombia	Multiple Sources	2	11%
Ireland	Multiple Sources	1	5%
Australia	Multiple Sources	1	5%
New Zealand	Multiple Sources	1	5%
Canada	Multiple Sources	1	5%
Vietnam	Multiple Sources	1	5%
