Pathogen Surveillance - Week 16

AI-powered analysis of 14 regulatory recall actions across 6 jurisdictions, aggregated from 66 primary sources monitored continuously by the AFTS intelligence platform.

TOTAL RECALLS 14 ▼ -54 (-79%) vs prior week	TIER-1 CRITICAL 9 Immediate public-health risk	ACTIVE OUTBREAKS 0 Confirmed cluster events	LEADING PATHOGEN Listeria monocytogenes 6 cases · 43% of total
--	---	--	---

§ 01 Intelligence Analysis

This week produced 14 pathogen-related recall incidents across the AFTS monitoring network, with 9 classified as Tier 1 and 0 confirmed outbreak events. *Listeria monocytogenes* dominated the surveillance window, accounting for 6 of the 14 incidents (43%). The elevated Tier 1 ratio indicates sustained regulatory pressure and should be interpreted by food manufacturers as a signal of tightening enforcement.

The prevalence of *Listeria monocytogenes* suggests post-process recontamination in ready-to-eat lines rather than thermal underprocessing. The likely failure modes include environmental harboring, sanitation SOP drift, and post-lethality recontamination.

Regulatory activity this week spanned multiple jurisdictions, signaling continued inspection intensity. AFTS recommends that food manufacturers use this briefing as a prompt to re-verify the single highest-leverage control for their commodity this week.

PROCESS AUTHORITY NOTE: This window contains 2 incidents implicating *Clostridium* or botulinum toxin, with Liquid Blenz Corp (United States) and Marché Rio (Canada) cited for *Clostridium botulinum*. Any shelf-stable low-acid, acidified, aseptic/UHT, hot-filled, or reduced-oxygen packaged product in the affected category must be reviewed to confirm the scheduled thermal processes under a qualified process authority, as required under FDA 21 CFR 113/114, EU Reg. 852/2004, CFIA SFCR, FSANZ Food Standards Code Ch. 3, and Japan’s Food Sanitation Act. Typical compliance gaps include unfiled or outdated scheduled processes, deviations resolved without qualified review, lapses in container or seal integrity, or formulation changes (pH, a_w, salt,

preservative) that have not been re-evaluated. A Tier 1 / Class I classification on a product of this class reliably triggers a process-filing audit and regulatory citations in every major jurisdiction.

§ 02Top 5 Critical Threats

Ranked by pathogen severity (*C. botulinum* → *Listeria* → STEC → *Salmonella*), outbreak status, and tier classification. Each row links to the originating regulatory notice.

#	DATE	PATHOGEN	COMPANY / BRAND	PRODUCT	JURISDICTION & SOURCE
1	15 Apr 2026	Clostridium botulinum T1	Liquid Blenz Corp <i>Good Brain Tonic</i>	Good Brain Tonic 16 oz & 32 oz (All codes)	United States FDA View source →
2	13 Apr 2026	Clostridium botulinum T1	Marché Rio —	Épices haïtiennes / Haitian spices — plastic container, refrigerated	Canada MAPAQ QC View source →
3	15 Apr 2026	Listeria monocytogenes T1	Southern Alp Sprouts Ltd <i>Southern Alp Sprouts / Pams</i>	Alfalfa & Onion Sprouts 120g; Pams Onion Sprouts Combo 120g (Batches J197, J199)	New Zealand MPI NZ View source →
4	15 Apr 2026	Listeria monocytogenes T1	Southern Alp Sprouts Limited / Foodstuffs Own Brands <i>Southern Alp Sprouts / Pams</i>	Alfalfa & Onion Sprouts 120g (Batches J197, J199; Best before 21/04/2026, 23/04/2026); Pams Onion Sprouts Combo 120g (Batch J199; Best before 23/04/2026)	New Zealand MPI NZ View source →
5	14 Apr 2026	Listeria monocytogenes T1	7-Eleven Canada <i>7-Eleven</i>	12 sandwich/sub/wrap products	Canada CFIA View source →

§ 03Distribution Analysis

PATHOGEN PROFILE

PATHOGEN	CASES	%	SHARE
Listeria monocytogenes	6	43%	
Salmonella spp.	4	29%	
Clostridium botulinum	2	14%	
STEC	1	7%	
E. coli	1	7%	

COUNTRY	AUTHORITY	CASES	%
Germany	BVL	4	29%
France	RappelConso / DGCCRF	4	29%
New Zealand	MPI / FSANZ	2	14%
Canada	CFIA	2	14%
United States	FDA / USDA FSIS	1	7%
Italy	Ministero della Salute	1	7%

§ 04 All 14 Recalls · 11 Apr - 17 Apr 2026

Complete record for the reporting period. Sorted by pathogen severity, outbreak status, and tier classification. Each row links to the originating regulatory notice.

#	DATE	PATHOGEN	COMPANY / BRAND	PRODUCT	JURISDICTION & SOURCE

14	13 Apr 2026	 <i>Salmonella spp.</i> 	DSN Green Food Company <i>DSN</i>	DSN Dried Ghome Sabzi (dried herb mixture: parsley, coriander, chives, spinach, fenugreek), 180g bag, MHD: 19.08.2026	Germany BVL (DE) View source →

Process authority. Analytical frameworks, severity rubrics, pathogen classification, and the engineering interpretation of each recall are developed under the process authority of AFTS, drawing on in-house expertise in food process engineering, thermal processing, and regulatory compliance. Every view is grounded in validated process engineering: thermal processing (21 CFR 113/114), pasteurisation (PMO), aseptic and UHT, hold-tube and F-value lethality, and HACCP. This is what the AFTS platform brings that pure data feeds do not — data under engineering authority.

Data & AI pipeline. The system aggregates regulatory recall notices from 66 primary sources across 60+ countries (FDA, USDA FSIS, RASFF, FSA, FSANZ, CFIA, RappelConso, BVL, AESAN, EFET, and national authorities) and processes each record through Gemini (extraction), OpenAI GPT (normalisation), and Claude (Tier-1 validation). Records are de-duplicated and harmonised into the accumulative dataset.

This briefing. Statistical analysis filters the accumulative dataset to the reporting week (11 Apr – 17 Apr 2026). AI-generated narrative is produced against AFTS process-authority prompts and edited for publication. Figures and pathogen names are preserved verbatim from source data.
