

AFTS · FOOD SAFETY VALIDATION INTELLIGENCE

Pathogen Surveillance · Week 17

AI-powered analysis of 19 regulatory recall actions across 11 jurisdictions, aggregated from 66 primary sources monitored continuously by the AFTS intelligence platform.

TOTAL RECALLS 19 ▲ +5 (+36%) vs prior week	TIER-1 CRITICAL 9 Immediate public-health risk	ACTIVE OUTBREAKS 3 Confirmed cluster events	LEADING PATHOGEN Listeria monocytogenes 4 cases · 21% of total
---	---	--	---

§ 01 Intelligence Analysis

This week produced 19 pathogen-related recall incidents across the AFTS monitoring network, with 9 classified as Tier-1 and 3 confirmed outbreak events. *Listeria monocytogenes* dominated the surveillance window, accounting for 4 of the 19 incidents (21%). The elevated Tier-1 ratio indicates sustained regulatory pressure and should be interpreted by food manufacturers as a signal of tightening enforcement.

The prevalence of *Listeria monocytogenes* at this level points to post-process recontamination in ready-to-eat lines rather than thermal underprocessing. The likely failure modes include environmental harboring, drift in sanitation standard operating procedures (SOPs), and post-lethality recontamination.

Regulatory activity this week spanned multiple jurisdictions, signaling continued inspection intensity. AFTS recommends that food manufacturers use this briefing as a prompt to re-verify the single highest-leverage control for their commodity this week.

§ 02 Top 5 Critical Threats

Ranked by pathogen severity (*C. botulinum* → *Listeria* → STEC → *Salmonella*), outbreak status, and tier classification. Each row links to the originating regulatory notice.

§ 05 **Methodology & Sources**

Process authority. Analytical frameworks, severity rubrics, pathogen classification, and the engineering interpretation of each recall are developed under the process authority of AFTS, drawing on in-house expertise in food process engineering, thermal processing, and regulatory compliance. Every view is grounded in validated process engineering: thermal processing (21 CFR 113/114), pasteurisation (PMO), aseptic and UHT, hold-tube and F-value lethality, and HACCP. This is what the AFTS platform brings that pure data feeds do not — data under engineering authority.

Data & AI pipeline. The system aggregates regulatory recall notices from 66 primary sources across 60+ countries (FDA, USDA FSIS, RASFF, FSA, FSANZ, CFIA, RappelConso, BVL, AESAN, EFET, and national authorities) and processes each record through Gemini (extraction), OpenAI GPT (normalisation), and Claude (Tier-1 validation). Records are de-duplicated and harmonised into the accumulative dataset.

This briefing. Statistical analysis filters the accumulative dataset to the reporting week (18 Apr – 24 Apr 2026). AI-generated narrative is produced against AFTS process-authority prompts and edited for publication. Figures and pathogen names are preserved verbatim from source data.
